El ction/R striction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 52-77, drawn to a semiconductor device, classified in class 257, subclass 690.
 - II. Claims 78-104, drawn to a method of making a semiconductor device, classified in class 438, subclass 613.

2. The inventions are distinct, each from the other because of the following reasons: Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case unpatentability of Group I invention would not necessarily imply unpatentability of the process of the group II invention, since the device of group I invention could be made by the processes different from those of group II invention. For example, by applying the closed conductive layer using electroplating process instead of chemical vapor deposition or sputtering.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
